19-21 August
16-18 September
14-16 October
11-13 November
16-18 December

If other dates are
required please contact
us

ArmorGroup's Hostile Environment Awareness Training (HEAT®) course has been devised to train and prepare clients, who are deploying to hostile or hazardous environments, to recognise and avoid potential threats and equip them with the skills to respond to any type of incident.

The HEAT course uses a systems approach technique which initially addresses the student's security environment and stresses the importance of travel pattern analysis, surveillance detection and attack recognition. ArmorGroup believes that this increased awareness, backed up with the necessary skills to deal with the problem, is the key to defeating the majority of incidents likely to be experienced by students.

The HEAT course, which combines theory with relevant practical experience, has consistently been at the forefront of innovative, realistic and effective training. The course is taught by operationally experienced and professionally qualified former Special Forces instructors.

The HEAT course can be modified to meet clients' regional or operational requirements although ArmorGroup recommends students receive training in the following core syllabus:

- Global threats and recent incidents
- Cultural awareness
- Security & situation awareness
- International travel & journey management
- Surveillance detection & evasion
- Car-jacking & vehicle security
- Country evacuation & emergency equipment
- Navigation/GPS/tracking systems
- First aid, trauma & road traffic accident response
- Communications systems
- Conflict resolution
- Residential & hotel security
- Weapons recognition & effects
- Improvised Explosive Device & mines
- Abduction, kidnap & ransom avoidance
- Hostage survival
- Incident reaction training
